PROFESSIONAL SUMMARY

Software Engineer with experience building scalable, high-performance web applications using React, TypeScript, and MUI. Proven track record of developing and optimizing a large-scale platform with 10+ modules in a fast-paced, startup-style environment, focusing on performance, reusable architecture, and seamless user experience. Skilled in translating complex UX designs into efficient, production-ready interfaces and integrating APIs to deliver reliable solutions.

SKILLS

- **Frontend Development:** React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, MUI (Material-UI), Tailwind CSS, Styled Components, Shadcn
- **State Management & APIs:** React Hooks, Context API, Redux (Redux-Toolkit), RTK query, REST APIs
- **Tools & Platforms:** Git, GitHub, Bitbucket, Vite, Webpack, Babel, ESLint, Prettier, Firebase, Socket.io, Chrome DevTools
- **Performance & Optimization:** Responsive Design, Accessibility Standards, Web Performance, Performance Debugging, Lighthouse Optimization
- **Development Practices:** Agile Development, Code Reviews, Unit Testing (Jest, React Testing Library), Clean, Reusable & Maintainable Code
- **Soft Skills:** Collaborative Communication, Teamwork, Mentorship, Analytical Reasoning, Organization, Versatility

WORK EXPERIENCE

Instavc Technologies Pvt. Ltd. (subsidiary of PeopleLink)
Associate Software Engineer | Jan 2024 – Jan 2026 | Hyderabad, India

- Led frontend development of a large-scale business management platform (10+ modules) using React, TypeScript, and MUI, owning architecture, component design, API integration, and state management.
- Optimized application performance by reducing unnecessary re-renders and implementing code-splitting and lazy loading, improving Lighthouse score to 90+ and reducing initial load time by 40%.
- Enabled organization-wide adoption across 200+ users by supporting daily workflows (communication, file sharing, updates) within the platform, reducing reliance on external tools.
- Mentored 3 junior developers, reviewed 100+ pull requests, and collaborated with UI/UX teams to deliver pixel-perfect, cross-browser compatible interfaces.
- Contributed to 10+ modules across the platform, including meetings & webinars, resources, contracts, task workflows, certification systems, and social integrations.

PeopleLink Unified Communications Pvt. Ltd.
Associate software developer | Jul 2022 – Jan 2024 | Hyderabad, India

- Rapidly learned and applied React, JavaScript, and TypeScript in real-world production modules for the Inlynk platform within the first few months, leading to conversion to full-time Software Developer from an Intern.
- Transitioned from understanding UI concepts to independently building and implementing responsive, production-grade components using MUI.
- Gained hands-on experience in API integration, state management, and bug fixing under senior developer guidance to improve stability and usability.

PROJECTS

Media Drive (Cloud Storage System) | *React, TypeScript, AWS S3 (Amplify), Context API, Redux*

A scalable cloud storage system enabling file upload, organization, sharing, and management with advanced performance optimizations and user controls.

- Built a Drive-like file management system supporting nested folder structures, file sharing, and batch operations with role-based access control.
- Implemented a robust file upload engine using AWS S3 (Amplify), supporting multi-file and folder uploads with progress tracking, cancellation, retry, and conflict resolution.

- Designed parallel upload strategy allowing multiple files to upload simultaneously to maximize bandwidth utilization and reduce overall upload time.
- Developed state management architecture using Context + useReducer, handling complex UI states like navigation (breadcrumbs), selection, and batch actions.
- Implemented advanced file operations including rename, move, delete, restore, and overwrite handling without creating duplicate records.
- Optimized user experience with infinite scalability considerations, efficient rendering, and URL-driven navigation for persistent state.

Collaboration (Real-Time Messaging System) | *React, TypeScript, Firebase, MUI*

A real-time messaging system supporting direct, group, and broadcast communication with rich media and advanced chat controls.

- Built a real-time messaging system using Firebase, supporting 1-on-1, group, and broadcast communication.
- Implemented rich messaging features including media sharing, link previews, audio messages, and message actions (edit, reply, forward, delete).
- Designed scalable chat state management handling multiple conversations, unread counts, and real-time updates.
- Developed chat organization and moderation features such as pinning, mentions, filtering, mute/block, and search.
- Implemented role-based group management and integrated productivity features like task linking and reminders.
- Optimized performance for chat lists and message threads by leveraging IndexedDB for local caching, ensuring smooth interaction with large datasets.

Dashboard & Analytics | *React, TypeScript, MUI, Chart Libraries, Context API, Redux*

A dynamic analytics dashboard providing real-time insights into user activity, system usage, and organizational metrics with deep drill-down capabilities.

- Built a scalable dashboard architecture using React Context and Redux to manage global filters and synchronize data across multiple components.
- Developed interactive data visualizations (bar, line, gauge charts) to track user activity, module usage, and engagement trends.
- Implemented advanced filtering system (date ranges, departments, users) with real-time updates across all dashboard views.
- Designed drill-down analytics flows, enabling navigation from company-level insights to individual employee-level data.
- Optimized performance using lazy data loading, API request cancellation, and infinite scrolling, ensuring smooth handling of large datasets.
- Built role-based views (Admin vs Personal) and shareable analytics features to enhance usability and decision-making.

EDUCATION

Bachelor of Technology – Computer Science & Engineering
GLA University, Mathura, India
Aug 2019 – May 2023
CPI: 7.86

Intermediate (12th Grade)
Laxmi Public School, Mughalsarai, India
2018
Percentage: 78.6%

High School (10th Grade)
Laxmi Public School, Mughalsarai, India
2016
Percentage: 76%

ADDITIONAL INFORMATION

- **Career Preferences:** Open to relocation for suitable opportunities
- **Passion:** Building performant, user-centric web applications
- **Learning:** Actively improving knowledge of modern web technologies and best practices
- **Languages:** English, Hindi
- **Gender:** Male
